Logger
LOGGER
You are working on a project that requires the use of a logging framework. Write a Java program to create an interface called "Logger" with methods for logging different types of messages, such as "debug", "info", "warning", and "error". Implement the interface in a class called "Log4jLogger" that uses the Log4j logging framework.
PROGRAM EDITOR
Java
Run
Save
import java.util.Scanner;
interface Logger{
void debug(String message);
void info(String message);
void warning(String message);
void error(String message);
}
public class Log4jLogger implements Logger{
@Override
public void debug(String message){
System.out.println("Debug: "+message);
}
@Override
public void info(String message){
System.out.println("Info: "+message);
}
@Override
public void warning(String message){
System.out.println("Warning: "+message);
}
INPUT
Starting application
User Login
Low memory space
Database connection failed
OUTPUT
Debug: Starting application
Info: User Login
Warning: Low memory space
Error: Database connection failed

Character
CHARACTER
You are developing a game that involves different types of characters, such as heroes, villains, and monsters. Write a Java program to create an interface called "Character" with methods for moving, attacking, and taking damage. Implement the interface in classes for each type of character, such as "Hero", "Villain", and "Monster".
PROGRAM EDITOR
Java
Run
Save
import java.util.Scanner;
import java.util.ArrayList;
import java.util.Collections;
import java.util.List;
public class Main{
public static void main(String[] args){
Scanner sc=new Scanner(System.in);
List<Integer> list=new ArrayList<>();
while (sc.hasNextInt()){
list.add(sc.nextInt());
}
Collections.sort(list);
for(int i=0;i< list.size();i++){
System.out.print(list.get(i));
if(i< list.size()-1){
System.out.print(" ");
}
}
sc.close();
}
}
