

CSA 0921 - Programming in java

Level - 2 Practice Programs

1.

The screenshot displays the SIMATS Online Programming Lab interface. The page title is "SIMATS Online Programming Lab" with a sub-header "JAVA PROGRAMMING". The user is logged in as "Vidhushini T S". The current practice program is "PRACTICE PROGRAMS-06/08/26". On the left, a "QUESTIONS" sidebar lists four questions: Q1 Student (10 marks), Q2 ATM (10 marks), Q3 TAX (10 marks), and Q4 BONUS (10 marks). The main area shows the "Q1 Student" question with a description: "Write a program to enter the mark of a student in four subjects. Then calculate the total and aggregate. Display the grade obtained by the student; if student scores an aggregate greater than 75% then grade is distinction". The "Your Code" section contains a Java program that uses a Scanner to take four marks as input, calculates the total and aggregate, and prints the grade based on the aggregate score. The "Input" field shows the values "85 90 78 82". The "Output" field shows the results: "Total: 339.0", "Aggregate: 83.75", and "Distinction". The "Run" and "Save" buttons are visible at the bottom of the code editor.

```
1 import java.util.Scanner;
2 public class Student{
3     public static void main(String[] args){
4         Scanner sc=new Scanner(System.in);
5         double m1=sc.nextDouble();
6         double m2=sc.nextDouble();
7         double m3=sc.nextDouble();
8         double m4=sc.nextDouble();
9         double total=m1+m2+m3+m4;
10        double aggregate=total/4.0;
11        System.out.println("Total: "+total);
12        System.out.println("Aggregate: "+aggregate);
13        if(aggregate>75){
14            System.out.println("Distinction");
15        }else if(aggregate>60&&aggregate<75){
16            System.out.println("First Division");
17        }else if(aggregate>50&&aggregate<60){
18            System.out.println("Second Division");
19        }else if(aggregate>40&&aggregate<50){
20            System.out.println("Third Division");
21        }else{
22            System.out.println("Fail");
23        }
24    }
25 }
```

The current practice program is "PRACTICE PROGRAMS-06/08/26". On the left, a "QUESTIONS" sidebar lists four questions: Q1 Student (10 marks), Q2 ATM (10 marks), Q3 TAX (10 marks), and Q4 BONUS (10 marks). The main area shows the "Q2 ATM" question with a description: "write a program to print the total amount available in the atm machine with the conditions applied total denominations are 2000, 500, 200,100. get the denomination priority from the user and the total number of notes from the user to display the total available balance to the user". The "Your Code" section contains a Java program that uses a Scanner to take the number of notes for each denomination as input, calculates the total available balance, and prints the result. The "Input" field shows the values "5 10 20 50". The "Output" field shows the result: "Total Available= 34000". The "Run" and "Save" buttons are visible at the bottom of the code editor.

```
1 import java.util.Scanner;
2 public class ATM{
3     public static void main(String[] args){
4         Scanner sc=new Scanner(System.in);
5         int n2000=sc.nextInt();
6         int n500=sc.nextInt();
7         int n200=sc.nextInt();
8         int n100=sc.nextInt();
9         int total=(2000*n2000)+(500*n500)+(200*n200)+(100*n100);
10        System.out.println("Total Available= "+total);
11    }
12 }
```

QUESTIONS

- Q1 Student 10 marks
- Q2 ATM 10 marks
- Q3 TAX 10 marks
- Q4 BONUS 10 marks

4/4 answered

Q3 TAX 10 marks

Write a program to calculate tax given following condition :

- If income is less than or equal to 150000 then to tax
- If taxable income is 150001 – 300000 the charge 10% tax
- If taxable income is 300001 – 500000 the charge 20% tax
- If taxable income is above 500001 the charge 30% tax

Your Code

```
1 import java.util.Scanner;
2 public class TaxCalculator{
3     public static void main(String[] args){
4         Scanner sc=new Scanner(System.in);
5         if(sc.hasNextDouble()){
6             double income=sc.nextDouble();
7             double tax=0;
8             if(income<=150000){
9                 tax=0;
10            }else if(income<=300000){
11                tax=(income-150000)*0.10;
12            }else if(income<=500000){
13                tax=(150000*0.10)+(income-300000)*0.20;
14            }else{
15                tax=(150000*0.10)+(200000*0.20)+(income-500000)*0.30;
16            }
17            System.out.println(tax);
18        }
19        sc.close();
20    }
21 }
```

Input

120000

Output

0.0

Run Save

QUESTIONS

- Q1 Student 10 marks
- Q2 ATM 10 marks
- Q3 TAX 10 marks
- Q4 BONUS 10 marks

4/4 answered

Q4 BONUS 10 marks

a bonus 5% salary is given to grade A workers and 10% bonus to Grade B , write a program to enter salary and grade of employee . if salary less than employee gets an extra 2% bonus on salary. Calculate the bonus that has to be given to the employee and print the salary that the employee will get

Your Code

```
1 import java.util.Scanner;
2 public class EmployeeBonus{
3     public static void main(String[] args){
4         Scanner sc=new Scanner(System.in);
5         if(sc.hasNextDouble()){
6             double salary=sc.nextDouble();
7             char grade=sc.next().toUpperCase().charAt(0);
8             double bonusPercentage=0;
9             if(grade=='A'){
10                bonusPercentage=0.05;
11            }else if(grade=='B'){
12                bonusPercentage=0.10;
13            }
14            if(salary<10000){
15                bonusPercentage+=0.02;
16            }
17            double bonus=salary*bonusPercentage;
18            double totalSalary=salary+bonus;
19            System.out.println("Bonus="+bonus);
20            System.out.println("Total="+totalSalary);
21        }
22        sc.close();
23    }
24 }
```

Input

8000 A

Output

Bonus=50.0
Total=\$60.0

Run Save
